Natural Stone Resources for Historical Monuments

2010

natural stone is considered to be a versatile durable and aesthetically pleasing building material from the beginning of civilization important structures and monuments have been built from or based on natural stone until the end of the nineteenth century the use of local stone resources was mostly in balance with the local environment strict environmental legislation has resulted in the closing of many long standing quarries in industrialized countries which has led to a shortage of traditional stone varieties this has caused problems for restoration practice cheap imported stone from less industrialized countries has become more widely available in recent years some of the issues related to built stone conservation and restoration covered by this volume are the establishment of inventories of possible replacement stones understanding the decay mechanism and use of preventive conservation methods for slowing down decay processes evaluation of the properties of natural stone and assessing the risks of using replacement stones of different qualities

Stone Sampler

2008

with an additional 200 new samples bringing the total to 752 this new edition of stone sampler provides swatches of natural stone including marble travertine onyx granite quartzite and limestone available for use in construction and decoration it is a concise portable reference for architects interior designers and builders summarizing the basic technical properties quarrying locations availability compressive and tensile strength resistance to wear and weather and other specifications for design and architecture professionals general information including geological and commercial classifications properties and characteristics and the various sourcing and processing techniques of stone is also supplied perfect for designers and specifiers the accompanying cd rom contains all the sample swatches in an easy to use tiff format for macintosh or pc

Natural Stone and World Heritage: Delhi-Agra, India

2020-05-24

this book discusses heritage stones which were used in the making of the architectonic heritage of delhi and agra encompassing unesco world heritage sites and heritage sites designated as prominent by the indian government the most famous monument of the two cities is the taj mahal of agra the book focuses on the geological characteristics of the famous makrana marble red sandstone and other sandstone variants of the vindhyyan basin and delhi quartzite the most widely used stones in almost all the monuments as well as on their quarries the work also aims to sensitise the public to protecting and preserving the architectonic heritage of these two densely populated cities in india as repositories of our past cultures and traditions identifying the nature and provenance of stones rocks used in construction will lead to better restoration for future generations in light of the deterioration of architectonic heritage through various natural weathering agencies and anthropogenic activities the book will serve as a useful source book to economic geologists geologists archaeologists architects historians and stone industry operators specifically and to academic and non academic communities travellers and tourism industry operators in general the book will benefit students researchers and rock enthusiasts spanning all age groups and academic levels

Natural Stone and World Heritage

2021-11-30

2012-12-10

handling this traditional but still captivating building material has its quirks today perhaps more than ever on the one hand it can no longer be taken for granted that stonemasonry skills will be readily available while there are also new requirements and applications not to mention damaging environmental influences that create uncertainty for planners and implementers this book is designed to provide assistance from cornice to curtain walling all details in words and sectional drawings are you looking for a particular stone the most important domestic types of stone with supplier details various surface treatments and their visual effect documentation of 15 selected example applications

Stone

2013-04-17

as one of the most widely accessible building materials available to man natural stone has been in extensive use for many centuries it is a significant component and in places the only one of man made structures the world over and its properties applications and behavior over long periods of time constitute a story that is almost unbelievably complex important elements of the story are described and interrelated in this volume that the exposed parts of the earth's crust provide a considerable variety of rock types is evident to any thoughtful observer to the geologist falls the task of characterizing and explaining this variety but many other kinds of specialists who are involved in the commercial use of stone also have an essential stake in the matter from quarryman to mason from architect to structural engineer and certainly from purchaser to future observer there is compelling interest in the nature appearance and durability of one stone as compared with another or of stone as compared with some other material small wonder then that much has been written

on the subject and that numerous aspects of commercial stone and its properties have appealed to a host of investigators

Natural Stone and Architectural Heritage

2019-09-23

this book is made up of contributions dealing with heritage stones from different countries around the world the stones are described as well as their use in vernacular and contemporaneous architecture heritage stones are those stones that have special significance in human culture examples include some very important stones that have been either neglected because they are no longer extracted or stones that have great significance in commercial terms but knowledge of their national and or international heritage has not been well documented in this collection of articles we have tried to spread awareness of architectural heritage around the world the natural stones that have been used in its construction and the need to preserve historical quarries that once provided the source of such stones historical quarries are linked to regional culture and tradition because of the specific technical and aesthetical characteristics of heritage stones which have lasted for centuries these historical quarries should be preserved to be able to use the stones for the proper restoration of monuments and historical buildings to avoid negative actions that can be observed in many places in the restoration of buildings which are some times part of world heritage sites the final intention of this book is to continuously grow the interest on this fascinating subject of heritage stones

building materials and construction is primarily written for the students of civil engineering to make them familiar with building materials and construction practices to build their interest in the field the book starts with explanation of building material concepts and goes on to explain all the important materials like lime bricks cement timber concrete etc in separate chapters following the same flow as prescribed in major universities special emphasis is given on construction materials such as foundation work stone and brick masonry plastering work door and window design roof and floors dpc etc

Basic of sound and hearing Part 4 building acoustics

1984

building acoustics is the science of controlling noise in buildings this includes the minimization of noise transmission from one space to another and the control of the characteristics of sound within spaces themselves building acoustics are an important consideration in the design operation and construction of most buildings and can have a significant impact on health and wellbeing communication and productivity they can be particularly significant in spaces such as concert halls recording studios lecture theatres and so on where the quality of sound and its intelligibility are very important building acoustics can be influenced by the geometry and volume of a space the sound absorption transmission and reflection characteristics of surfaces enclosing the space and within the space the sound absorption transmission and reflection characteristics of materials separating spaces the generation of sound inside or outside the space airborne sound transmission impact noise

How to Carve Wood

2009-09-18

all you need to get started carving is a piece of wood a small pocketknife and some quiet time to work what you make is up to you you might whittle small figures at the kitchen table try your hand at intricate ribbon moldings or even carve your own coat of arms

Safety of historical stone arch bridges

historical stone arch bridges are still a major part of the infrastructure in many countries although this type of bridge has proven to be an efficient construction type it often poses the problem of insufficient numerical models of the load bearing behavior therefore the book introduces methods to adapt life loads and introduces different types of numerical models of the load resistance respectively the book continues with the introduction of specific damages and strengthening techniques the book particularly focuses on the probabilistic safety assessment of historical arch bridges for which often only limited material and structural data is available
