New Approaches to the Twenty-First-Century Anglophone Novel

2019-12-20

this book discusses the complex ways in which the novel offers a vibrant arena for critically engaging

with our contemporary world and scrutinises the genre's political, ethical and aesthetic value. Far-reaching cultural, political and technological changes during the past two decades have created new contexts for the novel which have yet to be accounted for in literary studies. Addressing the need for fresh transdisciplinary approaches that explore these developments, the book focuses on the multifaceted responses of the novel to key global challenges including migration and cosmopolitanism, posthumanism and ecosickness, human and animal rights, affect and biopolitics, human cognition and anxieties of inattention, and the transculturality of terror. By doing so, it testifies to the ongoing cultural relevance of the genre. Lastly, it examines a range of 21st-century anglophone novels to encourage new critical discourses in literary studies.

Axis of Convenience

2009-08-01

Few relationships have been as misunderstood as the strategic partnership between Russia and China. Official rhetoric portrays it as the very model of international cooperation. Moscow and Beijing claim that ties are closer and warmer than at any time in history. In reality, however, the picture is highly ambiguous. While both sides are committed to multifaceted engagement, cooperation is complicated by historical suspicions, cultural prejudices, geopolitical rivalries and competing priorities. For Russia, China is at once the focus of a genuine convergence of interests and the greatest long-term threat to its national security. For China, Russia is a key supplier of energy and weapons but is frequently dismissed as a self-important power whose rhetoric far outstrips its real influence. An axis of convenience cuts through the mythmaking and examines the Sino-Russian partnership on its own merits. It steers between the overblown interpretation of an anti-western, particularly anti-american alliance and the complacent assumption that past animosities and competing agendas must always divide the two nations. Their relationship reflects a new geopolitics, one that eschews formal alliances in favor of more flexible and opportunistic arrangements. Ultimately, it is an axis of convenience driven by cold-eyed perceptions of the national interest. In evaluating the current state and future prospects of the relationship, Bobo Lo assesses its impact on the evolving strategic environments in central and east Asia. He also analyzes the global implications of rapprochement between Moscow and Beijing, focusing in particular on the geopolitics of energy and Russia-China-US triangularism.

the process of user centered innovation how it can benefit both users and manufacturers and how its emergence will bring changes in business models and in public policy innovation is rapidly becoming democratized users aided by improvements in computer and communications technology increasingly can develop their own new products and services these innovating users both individuals and firms often freely share their innovations with others creating user innovation communities and a rich intellectual commons in democratizing innovation eric von hippel looks closely at this emerging system of user centered innovation he explains why and when users find it profitable to develop new products and services for themselves and why it often pays users to reveal their innovations freely for the use of all the trend toward democratized innovation can be seen in software and information products most notably in the free and open source software movement but also in physical products von hippel s many examples of user innovation in action range from surgical equipment to surfboards to software security features he shows that product and service development is concentrated among lead users who are

ahead on marketplace trends and whose innovations are often commercially attractive von hippel argues that manufacturers should redesign their innovation processes and that they should systematically seek out innovations developed by users he points to businesses the custom semiconductor industry is one example that have learned to assist user innovators by providing them with toolkits for developing new products user innovation has a positive impact on social welfare and von hippel proposes that government policies including r d subsidies and tax credits should be realigned to eliminate biases against it the goal of a democratized user centered innovation system says von hippel is well worth striving for an electronic version of this book is available under a creative commons license

the link between gender and corruption has been studied since the late 1990s debates have been heated and scholars accused of bringing forward stereotypical beliefs about women as the fair sex policy proposals for bringing more women to office have been criticized for promoting unrealistic quick fix solutions to deeply rooted problems this edited volume advances the knowledge surrounding the link between gender and corruption by including studies where the historical roots of corruption are linked to gender and by contextualizing the exploration of relationships for example by distinguishing between democracies versus authoritarian states and between the electoral arena versus the administrative branch of government the bureaucracy taken together the chapters display nuances and fine grained understandings the book highlights that gender equality processes rather than the exclusionary categories of women and men should be at the forefront of analysis and that developments strengthening the position of women vis à vis men affect the quality of government
