House Building Manual 2006

a self building manual is a book written by an expert such as an architect an engineer or a planner to teach a non expert how to build their own house this thesis examines and reimagines these documents as a distinct form of architectural representation entailing specific forms of production circulation and reception i track the history of the self building manual within the mexican social economic and political context as well as the national housing policy and discussions regarding selfhelp and self built housing both in mexico and abroad i carry out a close reading of three of the most widely distributed manuals the peasant s manual the housing handbook and the manual for housing self

building and improvement this thesis argues that while these books were meant to disseminate information bridge knowledge gaps and ultimately empower people they end up doing the opposite by representing a self builder as a perpetual non expert these manuals prevent their audience from entering the realm of professional construction additionally they misrepresent how allegedly self built housing is produced based on these findings as well as fieldwork with tosepan and antorcha campesina two communities that are producing housing that is neither social produced by the state nor commercial produced by developers this thesis provides a new kind of self building manual the atlas of housing production is an inventory of existing protocols for producing housing in mexico the atlas describes the processes of financing sourcing materials designing and organizing labor to build a house as they are carried out by tosepan antorcha campesina commercial banks government agencies and real estate developers rather than prescribing a single ideal solution the atlas presents a set of equally valid possibilities flattening the hierarchy between allegedly expert and non expert knowledge by laying bare the virtues and shortcomings of each of these processes the atlas gives agency to its users allowing them to make informed decisions on how they wish to obtain a house finally by splitting the process into its component parts the atlas allows its readers to recombine them for imagining new forms of housing production

Self-Build Manual *2015-01-01*

this manual sheds light on every aspect of designing housing the organization of the living space and the residential building is dealt with systematically from the breadth depth stacking access to dwellings and the urban ensemble this revised edition has been expanded with 20 new exemplary projects boasts an improved structure and has been enriched with a new chapter about the process of design housing design is primarily focused on residential construction in larger entities such as stacked developments because of its wide ranging approach to the theme this manual is also useful when designing in low densities and even for the design of an individual house or villa it provides

the tools necessary to analyse the context of residential construction ranging from large scale tabula rasa plans to the infill of a gap in an urban elevation with regard to the tectonics of residential construction the supporting structure the envelope the scenography and the service elements are dealt with in turn in each case considering the consequences of the choice of material and form for the space and the living experience the manual pays considerable attention to the relationship between the domestic floor plan space and how it is experienced cover

House Building Manual 2008
