most science degrees will have a practical or laboratory based component which will require some sort of final report whether this be a conventional laboratory report or a final year dissertation all of these formats require students to be able to analyse their data in an appropriate way and subsequently convey their key thoughts and information to a third party therefore writing laboratory reports is an essential part any science degree this new revised edition sees the expansion of statistical examples including initial data checks and assumptions increased awareness of critical appraisal tools and resources project planning and a range of challenge yourself activities to supplement understanding and provides a comprehensive overview of what should be contained within each section of a scientific report and clearly explains how it should be presented written in a friendly and engaging style it guides the reader through abstracts literature reviews methodology reporting discussions and referencing and contains a wealth of examples and practical advice on how to improve and refine your own writing from writing a first lab report to preparing a final year dissertation or postgraduate thesis sports and exercise science students at all levels will find this book a valuable resource in developing both skill and confidence in scientific communication key features include the layout of the book is designed to reflect that of a typical scientific report to help students plan their own projects each chapter includes numerous examples exercises and activities to engage students and develop skills in each aspect of report writing the book includes discussion of critical appraisal techniques to help students refine their research questions all data sets and illustrations used are drawn from the key disciplines in sport and exercise science including physiology psychology and biomechanics

laboratory exercises are a necessary part of science education they enable students to better understand the principles discussed in lectures and provide them with hands on experience of the practical aspects of scientific research the purpose of this book is to provide students and instructors with a time tested set of lab exercises that illustrate the common sensory tests and or sensory principles used in evaluation of foods beverages and consumer products the appendices will also include a set of simple problem sets that can be used to teach and reinforce basic statistical tests approximately twenty years ago the sensory evaluation division of the institute of food technologists sponsored the preparation of a set of exercises titled guidelines for laboratory exercises for a course in sensory evaluation of foods edited by one of the co authors heymann this book will provide additional materials from the second author lawless as well as other instructors in a uniform format that can be easily adopted for course use most importantly the lab exercises will complement the flagship textbook in the field sensory evaluation of foods principles and practices 2e also by lawless and heymann and published by springer possible course adoption of the main text along with the lab manual should enhance the sales of these materials

experimental design is important enough to merit a book on its own without statistics that instead links methodology to a discussion of

how psychologists can advance and reject theories about human behaviour the objective of this book is to fulfil this role the first four chapters lay the foundations of design in experimental psychology the first chapter justifies the prominent role given to methodology within the discipline whilst chapters two and three describe between subject and within subject designs chapter four compares and contrasts the traditional experimental approach with that of the quasi experimental or correlational approach concluding that the consequences of not recognizing the value of the latter approach can be far reaching the following three chapters discuss practical issues involved in running experiments the first of these offers a comprehensive guide to the student researcher who wants to construct a good questionnaire including a discussion of reliability and validity issues the next chapter considers the basic tools of psychological research whilst both discussing the theoretical problem of how a sample from a population is chosen and offering useful hints on the practical issue of finding adequate populations from which to select participants the next chapter considers ethical practice within psychological research written in large part so that psychology students will be better able to anticipate ethical problems in their studies before they occur the final two chapters consider reporting and reading psychological papers chapter eight details what should and should not be included in a laboratory report the contributors use their collective experience of marking numerous lab reports to highlight common errors and provide solutions finally chapter nine describes the various elements of a journal article including tips on how to get the best out of your journal reading

this book is designed to provide lecture notes theory and experimental design of major concepts typically taught in most mechanics of

materials courses in a sophomore or junior level mechanical or civil engineering curriculum several essential concepts that engineers encounter in practice such as statistical data treatment uncertainty analysis and monte carlo simulations are incorporated into the experiments where applicable and will become integral to each laboratory assignment use of common strain stress measurement techniques such as strain gages are emphasized application of basic electrical circuits such as wheatstone bridge for strain measurement and use of load cells accelerometers etc are employed in experiments stress analysis under commonly applied loads such as axial loading compression and tension shear loading flexural loading cantilever and four point bending impact loading adhesive strength creep etc are covered labview software with relevant data acquisition daq system is used for all experiments two final projects each spanning 2 3 weeks are included i flexural loading with stress intensity factor determination and ii dynamic stress wave propagation in a slender rod and determination of the stress strain curves at high strain rates the book provides theoretical concepts that are pertinent to each laboratory experiment and prelab assignment that a student should complete to prepare for the laboratory instructions for securing off the shelf components to design each experiment and their assembly with figures are provided calibration procedure is emphasized whenever students assemble components or design experiments detailed instructions for conducting experiments and table format for data gathering are provided each lab assignment has a set of questions to be answered upon completion of experiment and data analysis lecture notes provide detailed instructions on how to use labview software for data gathering during the experiment and conduct data analysis

exploring animal behavior in laboratory and field second edition provides a comprehensive manual on animal behavior lab activities this new edition brings together basic research and methods presenting applications and problem solving techniques it provides all the details to successfully run designed activities while also offering flexibility and ease in setup the exercises in this volume address animal behavior

at all levels describing behavior theory application and communication each lab provides details on how to successfully run the activity while also offering flexibility to instructors this is an important resource for students educators researchers and practitioners who want to explore and study animal behavior the field of animal behavior has changed dramatically in the past 15 20 years including a greater use and availability of technology and statistical analysis in addition animal behavior has taken on a more applied role in the last decade with a greater emphasis on conservation and applied behavior hence the necessity for new resources on the topic offers an up to date representation of animal behavior examines ethics and approvals for the study of vertebrate animals includes contributions from a large field of expertise in the animal behavior society provides a flexible resource that can be used as a laboratory manual or in a flipped classroom setting

my students are for the most part potentially very good writers however when i get these students their lab report writing skills are quite limited and therefore are very poor focus for doing labs thus far in their science career has been how well they can perform the lab from verbal instructions not written instructions the students have a difficult time reading and understanding what the protocol wants them to do and they have an even more difficult time explaining what they performed during the lab activity in a lab report this project investigated how well the students discussed their course of action after performing the lab activity in a written report the students were given written lab protocols and were expected to follow the procedure and make observations along the way the labs were all completed in one 45 minute class period the students were then given one day in class to work on their lab report following the lab report rubric appendix a data collection for this project not only included lab report writing but what the students comfort levels were in different elements of the lab how well they reviewed their own work how well they reviewed other peer s work and how they felt about the whole lab report writing process throughout the year several teachers were also asked to evaluate how well these particular students processed and followed directions in their classrooms as well the resulted indicated that by implementing a peer review session into the lab report writing process the report score significantly improved the students who struggled at the beginning of the process were now completing quality lab reports in half the time and the peer review rubrics were being scored with the highest marks because of these positive outcomes i know that peer review is an integral part of the learning process to produce quality lab reports and i will continue to conduct

this practice in my classroom in years to come
