this book introduces condition based maintenance cbm data driven prognostics and health management phm in detail first explaining the phm design approach from a systems engineering perspective then summarizing and elaborating on the data driven methodology for feature construction as well as feature based fault diagnosis and prognosis the book includes a wealth of illustrations and tables to help explain the algorithms as well as practical examples showing how to use this tool to solve situations for which analytic solutions are poorly suited it equips readers to apply the concepts discussed in order to analyze and solve a variety of problems in phm system design feature construction fault diagnosis and prognosis

this translation brings a landmark systems engineering se book to english speaking audiences for the first time since its original publication in 1972 for decades the se concept championed by this book has helped engineers solve a wide variety of issues by emphasizing a top down approach moving from the general to the specific this se concept has situated itself as uniquely appealing to both highly trained experts and anybody managing a complex project until now this se concept has only been available to german speakers by shedding the overtly technical approach adopted by many other se methods this book can be used as a problem solving guide in a great variety of disciplines engineering and otherwise by segmenting the book into separate

parts that build upon each other the se concept s accessibility is reinforced the basic principles of se problem solving and systems design are helpfully introduced in the first three parts once the fundamentals are presented specific case studies are covered in the fourth part to display potential applications then part five offers further suggestions on how to effectively practice se principles for example it not only points out frequent stumbling blocks but also the specific points at which they may appear in the final part a wealth of different methods and tools such as optimization techniques are given to help maximize the potential use of this se concept engineers and engineering students from all disciplines will find this book extremely helpful in solving complex problems because of its practicable lessons in problem solving any professional facing a complex project will also find much to learn from this volume

the majority of professors have never had a formal course in education and the most common method for learning how to teach is on the job training this represents a challenge for disciplines with ever more complex subject matter and a lost opportunity when new active learning approaches to education are yielding dramatic improvements in student learning and retention this book aims to cover all aspects of teaching engineering and other technical subjects it presents both practical matters and educational theories in a format useful for both new and experienced teachers it is organized to start with specific practical teaching applications and then leads to psychological and educational theories the practical orientation section explains how to develop objectives and then use them to enhance student learning and the theoretical orientation section discusses the theoretical basis for learning teaching and its impact on students written mainly for phd students and professors in all areas of engineering the book may be used as a text for graduate level classes and professional workshops or by professionals who wish to read it on their own although the focus is engineering education most of this book will be useful to teachers in other disciplines teaching is a complex human activity so it is impossible to develop a formula that guarantees it will be excellent however the methods in this book will help all professors become good teachers while spending less time preparing for the classroom this is a new edition of the well received volume published by mcgraw hill in 1993 it includes an entirely revised section on the accreditation board for engineering and technology abet and new sections on the characteristics of great teachers different active learning methods the application of technology in the classroom from clickers to intelligent tutorial systems and how people learn

in this book john bird introduces electrical principles and technology through examples rather than theory enabling students to develop a sound understanding of the principles needed by technicians in fields such as electrical engineering electronics and telecommunications no previous background in engineering is assumed making this an ideal text for vocational courses at level 2

and 3 foundation degree and introductory courses for undergraduates the book presents a logical topic progression rather than following the structure of a particular syllabus however the coverage of this new edition has been brought fully in line with the electrical and electronics units of the 2007 btec national specification it is also designed to cover the requirements of the btec first specifications new material in this third edition includes brand new chapters on semiconductor diodes and transistors as well as added sections on batteries fuel cells and alternative and renewable energies relative and absolute voltages self and mutual inductance and virtual test and measuring instruments support material for tutors is available as a free download at textbooks elsevier com instructor s manual with full solutions and suggested marking scheme for all 7 revision tests in the book solutions manual with worked solutions for about 400 of the further problems in the book electronic files for all illustrations in the book new colour layout helps navigation and highlights key learning points formulae and exercises 400 worked problems and over 1 300 questions all with answers fully up to date with the 2007 btec national specification free lecturer support material available via textbooks elsevier com

since the introduction of recombinant human growth hormone and insulin a quarter century ago protein therapeutics has greatly broadened the horizon of health care many patients suffering with life threatening diseases or chronic dysfunctions which were medically untreatable not long ago can attest to the wonder these drugs have achieved although the first generation of protein therapeutics was produced in recombinant escherichia coli most recent products use mammalian cells as production hosts not long after the first production of recombinant proteins in e coli it was realized that the complex tasks of most post translational modifications on proteins could only be efficiently carried out in mammalian cells in the 1990s we witnessed a rapid expansion of mammalian cell derived protein therapeutics chiefly antibodies in fact it has been nearly a decade since the market value of mammalian cell derived protein therapeutics surpassed that of those produced from e coli a common characteristic of recent antibody products is the relatively large dose required for effective therapy demanding larger quantities for the treatment of a given disease this coupled with the broadening repertoire of protein drugs has rapidly expanded the quantity needed for clinical applications the increasing demand for protein therapeutics has not been met exclusively by construction of new manufacturing plants and increasing total volume capacity more importantly the productivity of cell culture processes has been driven upward by an order of magnitude in the past decade

integrating advances in molecular biology into bioprocesses presents a continuous challenge to scientists and bioengineers this

series is conceived to help meet this challenge it examines and assesses the feasibility of new approaches for the modification of cellular function such as gene expression protein processing secretion glycosylation immortalisation proliferation and apoptosis as well as the systematic study of the metabolic genotype phenotype relationship the series provides detailed coverage of the methodology for improving cellular properties of cells used in the production of biopharmaceuticals gene and cell therapies and tissue engineering it also seeks to explain the cellular mechanisms underlying in vitro physiological activity and productivity this volume which is based on presentations at the european workshop on animal cell engineering held in costa brava spain contains a collection of chapters relating to cellular function and modification by leading authorities in several different areas of basic research and the biopharmaceutical industry

this book reviews the most common state of the art methods for substructuring and model reduction and presents a framework that encompasses most method highlighting their similarities and differences for example popular methods such as component mode synthesis hurty craig bampton and the rubin methods which are popular within finite element software are reviewed similarly experimental to analytical substructuring methods such as impedance frequency response based substructuring modal substructuring and the transmission simulator method are presented the overarching mathematical concepts are reviewed as well as practical details needed to implement the methods various examples are presented to elucidate the methods ranging from academic examples such as spring mass systems which serve to clarify the concepts to real industrial case studies involving

automotive and aerospace structures the wealth of examples presented reveal both the potential and limitations of the methods

the aim of this book is to prepare students with knowledge and skills to understand the organizational needs and requirements of educational technology students should be able to use and manage both existing and emerging technologies effectively and be able to apply associated pedagogies to suit the environment but also evaluate and manage technological advances of future and the requisite pedagogical shifts to achieve efficiency and effectiveness the demand of educational technology has been rising steadily primarily due to the fact that e learning is a huge and significantly expanding world wide industry commercial e learning companies training departments in large companies and organizations computer software companies and educational institutions the world over employ large numbers of educational technology specialists there is a strong demand for technologists who understand educational theories and for instructional designers and teachers who understand technologies this book is targeted towards those who are looking for career in educational technology instructional design or media and information systems or may want to continue their studies in graduate programs in learning and instructional technology and those who are interested in becoming teacher in k 12 setting but need background in educational technology this book will also act as a valuable resource in

teacher education programs where primary focus on mainstream education and requires an authentic resource in instructional design and educational technology keeping in mind the varied needs of the organizations employees and potential students this book adopts a competency approach to learning and assessment the themes and topics take a multi disciplinary approach and are aimed at preparing students for competent and innovative educational technology professionals

whereas science technology and medicine have all called forth dedicated philosophical investigations a fourth major contributor to the technoscientific world in which we all live that is engineering has been accorded almost none of the philosophical attention it deserves this volume thus offers a first characterisation of this important new field by some of the primary philosophers and ethicists interested in engineering and leading engineers interested in philosophical reflections the volume deals with such questions as what is engineering in what respect does engineering differ from science what ethical problems does engineering raise by what ethical principles are engineers guided how do engineers themselves conceive of their profession what do they see as the main philosophical challenges confronting them in the 21st century the authors respond to these and other questions from philosophical and engineering view points and so illustrate how together they can meet the challenges and realize the opportunities present in the necessary encounters between philosophy and engineering encounters that are ever more important in an increasingly engineered world and its problematic futures
