**3D Printed Science Projects Volume 2** 2017-05-22 this historic book may have numerous typos and missing text purchasers can usually download a free scanned copy of the original book without typos from the publisher not indexed not illustrated 1921 edition excerpt to tell you something about the class that I am teaching it is known as the fifth special and is composed of backward children some of whom are known to be subnormal with the exception of three all the children are repeating the grade about one third of the pupils are negroes and practically all the others are of foreign parentage the parents as a whole are poor and illiterate and take little if any interest in the school this lack of interest on their part is a serious handicap in carrying out a project but one of the best things the project method does is to get the parents interested in school work purposing the project was started by the children themselves in a discussion of the february holidays someone asked why we celebrated washington's and lincoln's birthdays and when the others attempted to explain they soon discovered that their knowledge of this subject as well as of all others was very limited one of the boys who is fond of reading then suggested that we read a little life of lincoln which he had just finished this is a simple play given in hubbard's little american history plays for little americans the pupils are very fond of any kind of dramatization work and especially partial to these plays as they have made their history work so much more vital to them so that afternoon during reading period we dramatized the story and as soon as it was over there came a chorus of can't we give it in chapel it is a striking characteristic of backward children that they are always eager to perform so while I wanted them to do just what they had suggested I also wanted them to do it with a serious purpose in view therefore I merely asked why should

*Projects for the Elementary Schools* 2013-09 this second volume of the arduino project handbook delivers 25 more beginner friendly electronics projects get up and running with a crash course on the arduino and then pick any project that sparks your interest and start making each project includes cost and time estimates simple instructions colorful photos and circuit diagrams a troubleshooting section and the complete code to bring your build to life with just the arduino board and a handful of components you'll make gadgets like a rainbow light display noise level meter digital piano gps speedo meter and fingerprint scanner this collection of projects is a fast and fun way to get started with microcontrollers that's perfect for beginners hobbyists parents and educators 25 step by step projects
