the way we understand particular spaces is mediated by our perceptions of the difference between the sacred and the profane throughout history different peoples have revered vastly diverse spaces as sacred for vastly diverse reasons in sacred spaces benjamin z kedar and r j zwi werblowsky have compiled a wide ranging collection of essays exploring a broad array of

ancient and contemporary holy places the book reviews sacred spaces of the ancient religions judaism christianity islam and indian and east asian religions and discusses how these spaces have been conceptualized and experienced chapter topics include an investigation of the role of charismatic dreams in the creation of sacred sites in present day israel an analysis of cities as cultic centers in germany and italy during the middle ages a history of the sacred mount hiko in japan and a study of the muslim holy cities as foci of islamic revivalism in the eighteenth century sacred spaces provides readers with original and illuminating examples of the myriad ways in which we perceive and construct sacred space

the world population in 1930 was 2 billion it reached 3 billion in 1960 stands at 4.6 billion today and is expected to reach 6 billion by the end of the century the food and fiber needs of such a rapidly increasing population are enormous one of the most basic resources perhaps the most basic of all for meeting those needs is the soil there is an urgent need to improve and protect this resource on which the future of mankind directly depends we must not only learn how to use the soil to furnish our immediate needs but also ensure that the ability of the soil to sustain food production in the future is unimpaired this is indeed a mammoth task a 1977 united nations survey reported that almost one fifth of the world's cropland is now being steadily degraded the diversity of soil makes it necessary for research to be conducted in many locations there are basic principles however that are universal this series advances in

soil science presents clear and concise reviews in all areas of soil science for everyone interested in this basic resource and man's influence on it the purpose of series is to provide a forum for leading scientists to analyze and summarize the available scientific information on a subject assessing its importance and identifying additional research needs but most importantly the contributors will develop principles that have practical applications to both developing and developed agricultures
