a strategic book that gives you a sure shot competitive edge competitive exams test the conceptual knowledge of students along with time management skills however several students generally do not get the expected rank score despite knowing all the concepts it is an irony that students spend several precious hours and parents spend huge money running from one coaching institute to another but nobody guides them on time management right from the beginning and when students attend crash courses about 1 2 months before competitive exam they hardly have any time to master these skills the author of this book strongly believes that with proper and timely strategic guidance on time management every student can achieve well in competitive exams this book has the strength to cover the entire syllabus in 10 days for fast track coverage of the entire course online coaching students can contact the author at monicabhandari books gmail on this book encompasses 10 chapters each chapter starts with model

quick review of the important concepts followed by shortcuts tips tricks the strategic manner in which topics are inter linked in this book will help in building a strong conceptual clarity among the students for illustration questions from previous years papers of jee and neet with accurate shortest possible solutions are provided along with each topic the questions are based on the author s interactions with students who had appeared in the aforementioned competitive exams in the past years solving the carefully handpicked questions given in this book students will find themselves at ease with the chemistry paper in any competitive as well as board examination this book will enable the students with advanced abilities to attempt maximum number of questions accurately within the stipulated time remember practice is the key to success so practice more and more questions on each and every topic from a good question bank and here s the last but not the least and the most important tip revise all your incorrectly attempted questions repeatedly and bookmark important questions so that you gain perfection in attempting questions having similar concept or trick its not always about studying hard but studying smart regards dr monica bhandari

excerpt from second year college chemistry the trend of our present day research in both pure and applied chemistry implies that principles are more important than facts and methods and this trend it would seem should be reflected in our teaching it is conceded however that general principles cannot be profitably taught without first building a background of facts and for this reason the first year course must be largely given over to descriptive matter it is true that the student has many principles and laws thrust upon him during the first year but due to his lack of perspective and his crudeness as a manipulator he gets these only in a vague qualitative form they do not become a part of his stock in trade and so after a summers vacation they have for the most part passed into oblivion now if we grant that these general principles are the framework of our science we should not allow them to be thus forgotten we should revive them and expand them and work them over until they become familiar usable tools with this in mind therefore the selection of courses immediately following general chemistry is seen to be a matter of great importance the traditional course in qualitative analysis with its endless round of reactions and unknowns offers very little in the development of

2016-07-31

10/19

fixing of principles although it has a distinct value in the first year course as a means of systematizing a multitude of facts even the modernized course based on the ionic theory and the laws of chemical equilibrium makes too small a contribution in proportion to the time consumed the fact is that too little impression is made on a student by a multiplication of qualitative statements or the use of qualitative problems and laboratory exercises what a student needs is an accurate restatement of principles and the opportunity to verify and use these in a quantitative way the course covered by this text and the accompanying manual is an attempt to put into operation the plan implied in the above discussion it therefore assumes that the student knows very little about general principles but that he has a fair knowledge of facts with this slight assumption the text takes up the principles touched upon during the first year and restates them without apology about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

2016-05-05

excerpt from second year college chemistry a manual of laboratory exercises the apparatus employed in the experiments is made as simple as possible this has been done for two reasons first the author desires to make it possible to work through this entire manual in places where the cost of more elaborate apparatus would be prohibitive and second he desires to emphasize

2016-07-31

13/19

principles rather than the bewildering details of refined methods and instruments on the other hand the aim has been constantly kept in mind to make the work accurate and truly quantitative careful directions have been included for the preparation of all the apparatus although this preparatory work need not always be done by the student where the time is limited about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

## **University of Strathclyde Department of Pure and Applied Chemistry**

1990

the first chemistry department in port elizabeth was founded in 1929 at the pe technical college in russell road this institution was later renamed the college for advanced technical education and still later it became the pe technical college

moved to its summerstrand campus this is the story of this chemistry department over 75 years until 2005 when the technikon became part of the newly established nelson mandela metropolitan university archive material was used to compile the story of the various heads of department and their staff who contributed so much in making this department so successful
