STEM Learning Is Everywhere 2014-09-03 science technology engineering and mathematics stem permeate the modern world the jobs people do the foods they eat the vehicles in which they travel the information they receive the medicines they take and many other facets of modern life are constantly changing as stem knowledge steadily accumulates yet stem education in the united states despite the importance of these subjects is consistently falling short many students are not graduating from high school with the knowledge and capacities they will need to pursue stem careers or understand stem related issues in the workforce or in their roles as citizens for decades efforts to improve stem education have focused largely on the formal education system learning standards for stem subjects have been developed teachers have participated in stem related professional development and assessments of various kinds have sought to measure stem learning but students do not learn about stem subjects just in school much stem learning occurs out of school in organized activities such as afterschool and summer programs in institutions such as museums and zoos from the things students watch or read on television and online and during interactions with peers parents mentors and role models to explore how connections among the formal education system afterschool programs and the informal education sector could improve stem learning a committee of experts from these communities and under the auspices of the teacher advisory council of the national research council in association with the california teacher advisory council organized a convocation that was held in february 2014 entitled stem learning is everywhere engaging schools and empowering teachers to integrate formal informal and afterschool education to enhance teaching and learning in grades k 8 the convocation brought together more than 100 representatives of all three sectors along with researchers

policy makers advocates and others to explore a topic that could have far reaching implications for how students learn about stem subjects and how educational activities are organized and interact this report is the summary of that meeting stem learning is everywhere explores how engaging representatives from the formal afterschool and informal education sectors in california and from across the united states could foster more seamless learning of stem subjects for students in the elementary and middle grades the report also discusses opportunities for stem that may result from the new expectations of the next generation science standards and the common core standards for mathematics and language arts

Promising Practices in Undergraduate Science, Technology, Engineering, and Mathematics Education 2011-04-19 numerous teaching learning assessment and institutional innovations in undergraduate science technology engineering and mathematics stem education have emerged in the past decade because virtually all of these innovations have been developed independently of one another their goals and purposes vary widely some focus on making science accessible and meaningful to the vast majority of students who will not pursue stem majors or

careers others aim to increase the diversity of students who enroll and succeed in stem courses and programs still other efforts focus on reforming the overall curriculum in specific disciplines in addition to this variation in focus these innovations have been implemented at scales that range from individual classrooms to entire departments or institutions by 2008 partly because of this wide variability it was apparent that little was known about the feasibility of replicating individual innovations or about their potential for broader impact beyond the specific contexts in which they were created the research base on innovations in undergraduate stem education was expanding rapidly but the process of synthesizing that knowledge base had not yet begun if future investments were to be informed by the past then the field clearly needed a retrospective look at the ways in which earlier innovations had influenced undergraduate stem education to address this need the national research council nrc convened two public workshops to examine the impact and effectiveness of selected stem undergraduate education innovations this volume summarizes the workshops which addressed such topics as the link between learning goals and evidence promising practices at the individual faculty and institutional levels classroom based promising practices and professional development for graduate students new faculty and veteran faculty the workshops concluded with a broader examination of the barriers and opportunities associated with systemic change

The New Matthew Henry Commentary 2010-10-19 being an effective math educator is one part based on the quality of the tasks we give one part how we diagnose what we see and one part what we do with what we find yet with so many students and big concepts to cover it can be hard to slow down enough to look for those moments when students responses tell us what we need to know about next best steps in this remarkable book john sangiovanni helps us value our young learners misconceptions and incomplete understandings as much as their correct ones because it s the gap in their understanding today that holds the secrets to planning tomorrow s best teaching sangiovanni lays out 160 high quality tasks aligned to the standards and big ideas of grades k-2 mathematics including counting and representing numbers number relationships and comparison addition and subtraction within 100 and 1000 money and time and multiplication and division the tasks are all downloadable so you can use or modify them for instruction and assessment each big idea offers a starting task followed by what makes it a high quality task what you might anticipate before students work with the task 4 student examples of the completed task showcasing a distinct gap commentary on what precisely counts for mathematical understanding and the next instructional steps commentary on the misconception or incomplete understanding so you learn why the student veered off course three additional tasks aligned to the mathematics topic and ideas about what students might do

with these additional tasks it's time to break our habit of rushing into re-teaching for correctness and instead get curious about the space between right and wrong answers. Mine the Gap for Mathematical Understanding is a book you will return to again and again to get better at selecting tasks that will uncover students reasoning better at discerning the quality and clarity of students understanding and better at planning teaching based on the gaps you see.
