high school or at the community college there were days when the new topic was not understood by the students i could see it in their reaction faces to my explanation sometimes i was the culprit knowing full well that the homework is a review of that day s topic it must be delayed as an educator teaching math the crescendo of each day builds as we go further into the school calendar someone who missed out and could not grasp the idea needed to be tutored that luxury is not available frustrations teaching math gives the student an opportunity to see how basic math ideas are solved sometimes i give two scenarios in solving a problem other times a cheating way is shown so that math can be understood and also be fun some of the topics covered are the various ways to factor a binomial trinomial or polynomial another favorite is grasping the concept of greatest common factor or least common multiple right triangle trigonometry for the middle school student is explained using boating as the source of frustration how much to tip at a restaurant what does a half off sale really mean let us not forget the story or word problems that really cause concerns distance rate time all these ideas plus games and many more mathematical topics are reviewed on my 45 day road trip from delaware to florida coming back with several stops on the way home we ll explore these frustrations

Theoretical Computer Science and Discrete Mathematics

2020-07-20

this monograph is devoted to an entirely new branch of nonlinear physics solitary intrinsic states or autosolitons which form in a broad class of physical chemical and biological dissipative systems autosolitons are often observed as highly nonequilibrium regions in slightly nonequilibrium systems in many ways resembling ball lightning which occurs in the atmosphere we develop a new approach to problems of self organization and turbulence treating these phenomena as a result of spontaneous formation and subsequent evolution of autosolitons scenarios of self organization involve sophisticated interactions between autosolitons whereas turbulence is regarded as a pattern of autosolitons which appear and disappear at random in different parts of the system this monograph is the first attempt to provide a comprehensive summary of the theory of autosolitons as developed by the authors over the years of research the monograph is comprised of three more or less autonomous parts part i deals with the physical nature and experimental studies of autosolitons and self organization in various physical systems semiconductor and gas plasma heated gas mixture
