Survey Weights

2018

survey weights a step by step guide to calculation is the first guide geared toward stata users that systematically covers the major steps taken in creating survey weights these weights are used to project a sample to some larger population and can be computed for either probability or nonprobability samples sample designs can range from simple single stage samples to more complex multistage samples each of which may use specialized steps in weighting to account for selection probabilities nonresponse inaccurate coverage of a population by a sample and auxiliary data to improve precision and compensate for coverage errors the authors provide many examples with stata code

Distribution Data Guide

1956

this third edition of the coordinated portfolio investment survey guide has been prepared to assist economies that participate or are preparing to participate in the coordinated portfolio investment survey cpis it builds on and updates the second edition of the cpis guide 2002 to reflect the adoption of the balance of payments and international investment position manual sixth edition bpm6 as the standard framework for compiling cross border position statistics

Census Employment Survey User's Guide

1973

the accurate measurement of dry bulk cargoes by a vessel can minimise considerably the risk of shortage claims and disputes this guide outlines the methods and corrections for a draught survey to be carried out to the required accuracy it includes un ece draught survey forms in an effort to achieve standardisation throughout the industry

Coordinated Portfolio Investment Survey Guide (Third Edition)

2018-09-21

in the mediterranean and the black sea the assessment of demersal stocks mainly relies on scientific surveys bottom and beam trawl while the assessment of pelagic stocks is essentially based on acoustic surveys using acoustic techniques with mid water trawling these routine surveys at sea provide essential information which in turn are crucial to fine tune the assessments of the status of resources and to estimate more precisely indicators at the population and fish community levels however survey practices differ from one subregion to another each approach having its own strengths and limitations in addition there is still a lack of large scale standardized surveys aimed at analysing the diversity and distribution of the main demersal and pelagic species across the mediterranean and the black sea one way of tackling this issue is to carry out international scientific surveys covering the main demersal and pelagic stocks based on a common methodology the methodology presented in this publication aims at supporting the planning and implementation of regional demersal bottom and beam trawl and pelagic acoustic surveys it can be useful for the implementation of new surveys at sea in areas where demersal trawl and pelagic acoustic surveys are not regularly carried out it can also contribute to increasing comparability between existing surveys thanks to the standardization of methods sampling of catches and data recording and analysis finally it represents a valuable tool to define minimum requirements towards sustainability and management objectives at the regional and subregional level

Guide for Computation of Horizontal Geodetic Surveys

1960

in this book the author considers such issues as how to identify situations most appropriate for a mail survey how to reduce sampling bias and question response errors and how to obtain good response rates from a mail survey

Draught Surveys

2009

includes subject area sections that describe all pertinent census data products available i e business trade and services geography transportation etc
