taking due account of extreme events when constructing portfolios of assets or liabilities is a key discipline for market professionals extreme events are a fact of life in how markets operate in extreme events robust portfolio construction in the presence of fat tails leading expert malcolm kemp shows readers how to analyse market data to uncover fat tailed behaviour how to incorporate expert judgement in the handling of such information and how to refine portfolio construction methodologies to make portfolios less vulnerable to extreme events or to benefit more from them this is the only text that combines a comprehensive treatment of modern risk budgeting and portfolio construction techniques with the specific refinements needed for them to handle extreme events it explains in a logical sequence what

constitutes fat tailed behaviour and why it arises how we can analyse such behaviour at aggregate sector or instrument level and how we can then take advantage of this analysis along the way it provides a rigorous comprehensive and clear development of traditional portfolio construction methodologies applicable if fat tails are absent it then explains how to refine these methodologies to accommodate real world behaviour throughout the book highlights the importance of expert opinion showing that even the most data centric portfolio construction approaches ultimately depend on practitioner assumptions about how the world might behave the book includes key concepts and methods involved in analysing extreme events a comprehensive treatment of mean variance investing bayesian methods market consistent approaches risk budgeting and their application to manager and instrument selection a systematic development of the refinements needed to traditional portfolio construction methodologies to cater for fat tailed behaviour latest developments in stress testing and back testing methodologies a strong focus on the practical implementation challenges that can arise at each step in the process and on how to overcome these challenges understanding how to model and analyse the risk of extreme events is a crucial part of the risk management process this book provides a set of techniques that allow practitioners to do this comprehensively paul sweeting professor of actuarial science university of kent how can the likeliness of crises affect the construction of portfolios this question is highly topical in times where we still have to digest the last financial collapse malcolm kemp gives the answer his book is highly recommended to experts as well as to students in the financial field christoph krischanitz president actuarial association of austria chairman wg market consistency of groupe consultatif
