Hierarchical Bottom-Up Methodology for Integrating Dynamic Ethynylhelicene Oligomers 2013-08-28

in biological systems molecules hierarchically form ordered assemblies and macroscopic substances as exemplified by the assembly of proteins the development of such systems using oligomeric macromolecules obtained by organic synthesis can provide insights into biological phenomena and will lead to the creation of new materials in this regard synthetic double helix molecules are attractive subjects of study because they have an important structural motif that appears widely in nature and can exhibit dynamic structural change this thesis describes an unprecedented bottom up approach using synthetic ethynylhelicene oligomers which form dynamic double helices in organic media oligomer synthesis homo and hetero double helix formation and higher assembly formation due to intercomplex interactions are documented the hierarchical assembly formation is a cogent reminder of the assembly of biological proteins that create living creatures also notable here is the demonstration of a methodology of providing diverse hetero double helices and their higher assemblies by changing the combination of oligomers which can be another advantage of this synthetic system

through this chapter you will be able to build user stories and other types of software requirement engineering documents the third chapter is on software project management since we learned as to how to create good software requirements in chapter 2 now we can do project planning activities for these software requirements the fourth chapter is on software feasibility studies for each software requirement we can find out feasible solutions using prototyping techniques which are discussed in this chapter the fifth chapter is on software high level design a software product consists of many pieces and understanding it from a higher level is important also using pre defined templates in form of architecture and software patterns helps in building software products more productively chapter 6 is devoted to learn user interface design we can learn how to build user interfaces using mock up screens chapter 7 is concerned about learning as to how to design and program so that business logic can be implemented we will learn all object oriented design concepts including class diagrams object diagrams sequence diagrams statechart diagrams etc programming concepts like variables methods classes and objects are also covered extensively chapter 8 is about database design we will learn about entity relationship diagrams and other concepts to design databases for software products chapter 9 is about software testing we will learn everything about unit integration system and user acceptance testing in this chapter chapter 10 is about software maintenance apart from software maintenance we will also learn about production instances of software

products in this chapter chapter 11 is about project execution and conflict management we will learn about project tracking techniques like gantt charts for waterfall projects and burn down chart for agile projects learning software engineering also involves project management the main case study involves building a software product which is known as smart city this software product can be used to provide information about a city colleges libraries hotels industries parks museums zoos restaurants malls etc the case studies i have provided are all based on scrum software engineering is completely aligned with scrum in the case study software requirements are in form of user stories project management is provided in terms of release and sprint planning even daily planning is also discussed as a software product must be developed incrementally i have provided enough material to learn as to how to develop a software product incrementally the release and sprint planning for the software products we will be building are explained lucidly and you will learn these aspects while you build a software product user interfaces are designed and implemented incrementally using mock up screens business logic is designed and implemented incrementally using classes even database is also designed incrementally unit integration system and user acceptance testing is also discussed in terms of incrementally building the software product the smart city product is built over 3 releases using 10 sprints

while general systems research has had a considerable impact on research in
the social sciences this impact has been mainly conceptual and has not served
to provide the operational and methodological aids for research which are
possible in addition many of those systems oriented directions and results
which do impact social science research have developed inde pendently and in
piecemeal fashion in recent decades the main develop ment of this book is a
cohesive framework within which to integrate results of general systems
research and which provides a means for the organiza tion of data and
observations and operational procedures by which to proceed in the
investigation and study of social and socio technical systems the book
systematically develops in the first five chapters ail of the basic concepts
and aspects which make up the framework showing wherevertop down vs the bottom

sources of these concepts and placing them in historical perspective the developments of the first five chapters are pulled together and integrated in the last chapter into a conceptual and operational general systems problem solving framework which extends the investigative capabilities of researchers of specific systems the last chapter also contains an example of an overall investigation which utilizes the framework and which proceeds from system definition through the derivation of explanatory knowledge regarding the object system and which illustrates in detail most of the concepts and elements of the framework
