after setting the stage through a discussion of the main schools of thought in asset pricing this thesis talks about existing research in the field of market sentiment several studies have shown that sentiment seems to influence the way investors process information and subsequently take decisions a phenomenon which was suggested by psychological frame reference theory as early as 1940 based on a literature review five types of events are analyzed for 21 stocks in the german stock market over a period of six years in this process about 30 000 headlines have been condensed into a sample of 1 518 relevant events which was later clustered along

well as along several states of market sentiment on two levels
even though some of the results lack strong statistical significance
two main patterns have crystallized positive surprises seem to lead
to a positive overreaction in bull markets while neutral information
tends to lead to a negative overreaction in bullish conditions with
respect to negative surprises the results are ambiguous although a
relatively small 3 day event window was chosen the patterns seem
robust due to the observation that the main effect of sentiment on
information processing materializes on the event day itself a further
analysis of earnings announcements reveals that the direction of
the business outlook published in line with earnings does not show
any relation to sentiment however a further interesting pattern is
discovered stocks which showed a considerably positive
performance in the 30 day period preceding an earnings
announcement winners display a significant negative underreaction
to news of any surprise direction when compared to previous loser
stocks

a bear market may last for a week a month or even a few years
but it can take only a day an hour or even a few minutes for the
value of an investment portfolio to be slashed to half of its former
value some bear markets start with a bang like the crash of 7
others creep up slowly so that investors do not realise they are in a
bear market and carry on as if nothing has happened of course not
even the experts can accurately forecast what the market will do
however there are signs that can indicate a bear market is
approaching and if recognised give prudent investors time to take
steps to safeguard their portfolios the first part of this book
describes how to recognise the signals that might precede a bear
market and how to watch the various indices for sell signals the
second part deals with methods to help both investors and traders
to survive by understanding what changes in volume represent
when to use a moving average and how to stay ahead of the pack

in march 2020 the stock markets witnessed an unprecedented
crash bringing to an end the longest bull run in history within six
weeks the markets declined nearly forty percent as measured by
the leading bse sensex and nifty indices we have since been
witnessing extreme price movements across commodities including
gold silver and copper oil prices had crashed alongside stocks in
mar 20 to near zero levels briefly though the dollar index which

represents the strength of the us dollar against leading world trading
currencies is pointing to a sharp reversal markets the world over
appear to be at a crucial juncture it may be that a big finger from
the sky pressed the factory reset button on the affairs of planet
earth the author reminds us that the long years of the bull market
had numbed most investors to the risks of investing in equity yet in
the months preceding the crash there were abundant signals of a
market top ripe for a correction as the author points out the
markets are appearing to bounce back but the trends would seem
to suggest that the bear market may not be done yet the weak
bounce back of nifty bank index post march 20 decline given that
the banking sector is a good proxy for the overall economy is a
sufficient pointer to what may be in store in the months to come
this book is an interesting and informative read for everyone
curious to know what is going on with the markets and what makes
the markets move the way it does growth and decay are both
cyclical and inevitable as are phases of bull and bear markets
